Software Developer at Foxconn-HP, Indianapolis

June 2018 — July 2019

- Determines operational feasibility by evaluating analysis, problem definition, requirements, solution development, and proposed solutions.
- ***Developed a software to get an idea about the unit and why it failed the test. I have created a software to find missing computer or get diagnostic log before the computer get disconnected from network. That has improved work productivity by reducing retesting time. By scanning the unit, the technician will be able to access the error message and fix the issue before running the test again.***
- Documents and demonstrates solutions by developing documentation, flowcharts, layouts, diagrams, charts, code comments and clear code.
- Prepares and installs solutions by determining and designing system specifications, standards, and programming.
- Improves operations by conducting systems analysis; recommending changes in policies and procedures.
- Obtains and licenses software by obtaining required information from vendors; recommending purchases; testing and approving products.
- Updates job knowledge by studying state-of-the-art development tools, programming techniques, and computing equipment; participating in educational opportunities; reading professional publications; maintaining personal networks; participating in professional organizations.
- Protects operations by keeping information confidential.
- Provides information by collecting, analyzing, and summarizing development and service issues.
- Accomplishes engineering and organization mission by completing related results as needed.
- Develops software solutions by studying information needs; conferring with users; studying systems flow, data usage, and work processes; investigating problem areas; following the software development life cycle.
